1. INTRODUCTION

State Significant Development (SSD) 5170 (as modified) requires the Bengalla Mining Company Pty Ltd (BMC) to make a comprehensive summary of the Bengalla Mine (Bengalla) monitoring results, reported in accordance with the specifications in any conditions of SSD-5170 (as modified), or any approved plans and programs, publicly available on its website. This document has been prepared in accordance with the Department of Planning and Environment (DPE) *Web-Based Reporting Guideline* (October 2015) to satisfy the above requirement.

This document provides a summary of environmental monitoring data sampled as prescribed by SSD-5170 (as modified) for February 2023 (Reporting Period). Monitoring data provided is as follows:

- Air quality, particulate matter less than 10 microns (PM₁₀), total suspended particulate (TSP) matter and depositional dust;
- Noise; and
- Blast overpressure and ground vibration.

2. AIR QUALITY

The air quality monitoring program at Bengalla is undertaken in accordance with the requirements of SSD-5170 (as modified), EPL 6538 and the Bengalla Air Quality Management Plan (AQMP). Air quality monitoring results relevant to SSD-5170 are summarised in the following sections.

2.1 Particulate Matter less than 10 Microns

To evaluate the performance of Bengalla against the SSD-5170 criterion for particulate matter, BMC operates and maintains two High Volume Air Samplers (HVAS) measuring PM₁₀. The HVAS are run for 24 hours every six days.

PM₁₀ data for the Reporting Period is provided in **Table 1**.

Pollutant:	PM ₁₀
Unit of measure:	Micrograms per cubic metre (µg/m ³)
Monitoring location:	See Table 1 and Appendix A .
Monitoring frequency:	24 hours every 6 days
24 Hour Average Criteria:	50 µg/m ³ (Project Alone)
Annual Average Criteria:	25 µg/m ³
Sampled:	01/2/2023 – 28/2/2023

Table 1. PM₁₀ Monitoring Summary

Run Date	Run Date Reading (µg/m ³)	
	PM10-1 Racecourse Road	PM10-3 Roxburgh Road
04/02/2023	41.2	41.6
10/02/2023	16.8	16.2
16/02/2023	34.0	35.6
22/02/2023	15.6	4.8
28/02/2023	29.1	26.2

(Table 1 represents total impact (ie incremental increase in concentration due to the development plus background concentrations due to other sources))

2.2 Total Suspended Particle Matter

To evaluate the performance of Bengalla against the SSD-5170 criterion for particulate matter, BMC operates and maintains two HVAS measuring TSP. The HVAS are run for 24 hours every six days.

TSP data for the Reporting Period is provided in **Table 2**.

Pollutant:	TSP
Unit of measure:	$\mu\text{g}/\text{m}^3$
Monitoring location:	See Table 2 and Appendix A .
Monitoring frequency:	24 hours every 6 days
Annual Average Criteria:	90 $\mu\text{g}/\text{m}^3$
Sampled:	01/2/2023 – 28/2/2023

Table 2. TSP Monitoring Summary

Run Date	HV02 Racecourse Road	HV03 Logues Lane
04/02/2023	148	110
10/02/2023	49.8	38.3
16/02/2023	83.0	57.0
22/02/2023	42.0	28.4
28/02/2023	85.1	40.9

(Table 2 represents total impact (ie incremental increase in concentration due to the development plus background concentrations due to other sources))

bengalla.com.au

2.3 Depositional Dust

To evaluate the performance of Bengalla against the SSD-5170 criterion for depositional dust, BMC operates and maintains 3 depositional dust gauges surrounding the Bengalla operations.

Depositional dust data for the Reporting Period is provided in **Table 3**.

Pollutant:	Depositional Dust
Unit of measure:	Grams per metre squared per month (g/m ² /month)
Monitoring location:	See Table 3 and Appendix A .
Monitoring frequency:	Monthly
Maximum depositional dust increase criteria:	2 g/m ² /month ^(b)
Maximum total depositional dust criteria:	4 g/m ² /month ^(a)
Sampled:	31/1/2023 – 28/02/2023

(a) Total impact (ie incremental increase in concentrations due to the development plus background concentrations due to other sources);

(b) Incremental impact (ie incremental increase in concentration due to the development on its own)

Table 3. Depositional Dust Monitoring Summary

Sampling point		Measured Value (February 2023) g/m ² /month	Sampling Comments
D06	Logues Lane, Muswellbrook	5.3	Insects, vegetation
D10	Racecourse Road, Muswellbrook	2.2	Insects, vegetation
D26	Wybong Road, Muswellbrook	1.3	Insects, vegetation

(Table 3 represents total impact (ie incremental increase in concentration due to the development plus background concentrations due to other sources))

3. NOISE

The noise monitoring program at Bengalla is undertaken in accordance with the requirements of SSD-5170 (as modified), EPL 6538 and the Bengalla Noise Management Plan (NMP).

Compliance attended noise monitoring is undertaken for 15 minutes once per calendar month during the night period (10 pm to 7 am) at three locations representative of the nearest private receivers.

Noise monitoring data for the Reporting Period is provided in **Table 4**.

Pollutant:	Noise – Bengalla Only
Unit of measure:	L _{Aeq} (15 minute)
Monitoring location:	See Table 4 and Appendix B.
Monitoring frequency:	Monthly
AN01 criteria:	35 dB(A)
AN04 criteria:	35 dB(A)
AN03 criteria:	40 dB(A)
Sampled:	27 February 2023

Table 4. Noise – Bengalla Only¹ LAeq (15 minute) Monitoring Summary

	Sampling point	Sample Date	Sample Time	Measured value
AN01	1431 Wybong Road	27/2/23	00:07 – 00:22	23
AN03	1312 Denman Road	27/2/23	00:42 – 00:57	29
AN04	Opposite 9 Racecourse Road	27/2/23	01:20 – 01:35	36 ^{#2}

IA - Inaudible. When there was no noise from the source of interest (Bengalla Mine) audible at the monitoring location.

1 LAeq, 15minute operational noise levels for Bengalla in the absence of all other noise sources.

2 As per Bridges Acoustic Report Bengalla Mine noise contribution was within relevant noise criteria or no more than 2 dBA above relevant criteria at all three monitoring locations.

4. BLASTING

BMC maintains three blast monitors to measure blast overpressure and ground vibration against the SSD-5170 criteria.

The blast overpressure and ground vibration data for the Reporting Period is provided in **Table 5**.

Pollutant:	Air blast overpressure & ground vibration peak particle velocity
Unit of measure:	dB (Lin Peak) and millimetres per second (mm/s)
Monitoring locations:	See Tables 5 and Appendix B .
Monitoring frequency:	All blasts
Overpressure criteria:	<p>a) 115 linear decibels (dB(L)) for more than 5% of the total number of blasts carried out on the premises within the 12 months annual reporting period; and</p> <p>b) 120 dB(L) at any time.</p>
Ground vibration criteria:	<p>a) exceed 5 millimetres/second (mm/s) for more than 5% of the total number of blasts carried out on the premises within the 12 months annual reporting period; and</p> <p>b) 10mm/s at any time.</p>
Sampled:	01/02/2023 – 28/02/2023

Table 5. Blast Monitoring Summary

Date	Time	Ground Vibration (mm/s)			Overpressure (dBL)		
		BLK	MRE	SCH	BLK	MRE	SCH
01/02/23	3:09:44 PM	0.17	2.71	0.08	93.40	101.00	92.60
